

— INDIA-FIRST • B2B IT PROCUREMENT NETWORK

Working name • swap for [Product Name]

One RFQ. Verified IT vendors. Faster procurement.

InfraVendra turns scattered IT buying — email, Excel, WhatsApp, phone calls — into one structured workspace: publish a requirement, match verified vendors, compare real quotes, negotiate on the record, and issue the PO.

Trusted Vendors. Smarter Procurement.

● Verified vendors

Structured RFQ

Quote comparison

On-record negotiation

Vendor-led network

[Founder Name] • [Company Name] • Seed • [Date] | The B2B IT Procurement Network

WHY NOW

IT got more complex. Buying it didn't get easier.

Every business now runs on more hardware, more software, more security and more vendors than ever — while the buying process is still email, Excel and WhatsApp.

More to buy

Hybrid work, distributed offices, cloud, endpoint security and compliance multiply what a single company has to procure and keep current.

More vendors

Resellers, SIs, OEM partners, security specialists and cloud partners — a fragmented long tail that's hard to discover and harder to trust.

Same manual flow

Procurement still runs on inboxes and spreadsheets, with no structured way to compare quotes or hold vendors accountable.

Framing based on well-known market dynamics. No specific market-size figures are claimed on this slide.

— THE PROBLEM • 01

IT procurement is still fragmented.

A single laptop order can take days and pass through five tools — none of which talk to each other.

TODAY • one requirement, no system of record

Requirement

Email / WhatsApp / phone

MANUAL

SPREADSHEET

Negotiate on phone/email

OFF-RECORD

Approvals → PO → track

SCATTERED

- Slow quotation turnaround — days to hear back from every vendor.
- Vendor discovery is fragmented; trust is a gut call.
- OEM partner status and certifications are hard to validate.
- Quotes arrive in different formats nobody wants to compare.
- Negotiation happens outside the procurement record.
- History is scattered; vendor performance is unmeasured.
- Buyers over-rely on the two vendors they already know.

— THE PROBLEM • 02

Three things break every time.

Even when you find vendors, the process falls apart at trust, comparison and negotiation.

TRUST

Is this vendor real?

OEM partner levels, ISO and technical certifications, awards — all claimed on a PDF, none easy to verify. Buyers guess.

COMPARISON

Quotes nobody can compare.

Different formats, different assumptions, hidden terms on warranty, stock and payment. Apples vs oranges in a spreadsheet.

NEGOTIATION

It vanishes into WhatsApp.

Counter-offers happen on calls and chats. No trail of who offered what, no proof of savings, no leverage next time.

And on the other side —

Vendors spend their days chasing opportunities they can't see.

Good vendors with ready stock and real partnerships have no efficient channel to reach buyers who need exactly what they carry — today.

win/loss visibility

— THE SOLUTION

One procurement workspace. Two sides, one record.

InfraVendra turns procurement into a structured workflow — from requirement to purchase order — with verified vendors and every quote, revision and negotiation in one place.

— PRODUCT • SMART RFQ

Publish once. Reach the right vendors.

A structured requirement becomes an RFQ that's automatically matched to verified vendors who actually carry it — with a clock for urgent, ready-stock needs.

invite / discover

Buyers can invite preferred vendors *and* let InfraVendra surface relevant verified vendors they've never worked with — expanding the shortlist beyond the usual two.

— PRODUCT • COMPARISON

Quotes nobody wanted to compare — compared for you.

Every quote lands in one normalized view: price, stock, delivery, warranty, terms and vendor score, side by side. We surface trade-offs — we never blindly push the cheapest.

● ● ● infravendra • compare • RFQ-2048 • 10× Dell Latitude 5450

	VENDOR A • ZENITH	VENDOR B • NORTHBRIDGE	VENDOR C • AARAV
Unit price	₹58,000	₹56,500	₹59,200
Stock	READY	10 DAYS	READY
Delivery	2 days	10 days	1 day
Warranty	3 yrs	3 yrs	5 yrs
Payment	30 days	15 days	30 days
Vendor score	94	88	91

◆ Best overall • Vendor C

₹ Best price • Vendor B

⚡ Fastest delivery • Vendor C

♥ Best warranty • Vendor C

Recommendations weigh price *with* stock, delivery, warranty, terms and reliability — the cheapest quote (Vendor B) is 10 days out, so it isn't "best overall."

— PRODUCT • NEGOTIATION

Negotiation, on the record.

Counter-offers happen inside the platform, not in WhatsApp. Every revision is tracked, savings are measured, and next time you have leverage.

— THE MOAT • VERIFIED VENDOR INTELLIGENCE

Trust you can see — not claims on a PDF.

Every vendor profile separates what's **verified** from what's vendor-provided or pending. Reliability is earned through evidence and performance — it can never be bought.

One product identity. Every vendor's live terms.

InfraVendra owns the master spec for each IT product. Vendors attach their price, stock, lead time, warranty and discount — so quotes stay comparable by construction.

COMPUTING

Laptops • Desktops • Workstations • Servers

NETWORKING

Switches • Routers • Firewalls • APs • SFPs • Accessories

STORAGE

InfraVendra maintains

Master product identity & specification — the single source of truth every quote maps to.

Vendors maintain

Price • stock • lead time • warranty • discount • commercial terms — bulk-uploaded via CSV/Excel, later APIs. AI normalizes messy catalogs and flags duplicate SKUs.

— THE BIG IDEA

Not RFQ software. A procurement **network**.

Software gets used. A network compounds. Every buyer, vendor and completed order makes InfraVendra more valuable to everyone already on it.

THE FLYWHEEL

The long-term vision: connect **Businesses ↔ Verified vendors ↔ OEM/distributor ecosystem**. Once liquidity exists, it's very hard to unseat.

— DISTRIBUTION • THE UNLOCK

Vendors become our distribution channel.

Instead of acquiring every buyer ourselves, we hand vendors a branded procurement workspace and let them bring the customers they already have.

↓ CAC

Vendor-led acquisition replaces buyer-by-buyer sales.

Why a vendor does this

- ✓ Modern procurement portal for their customers — for free.
- ✓ They see their customers' RFQs first — home-field advantage.
- ✓ Tools to manage customers, catalog and pipeline in one place.

THE MATH

1 vendor × 50 customers → 50 buyers create RFQs → each RFQ pulls in competing vendors → each new vendor brings *their* customers. The network seeds itself.

— LANDSCAPE • HONEST POSITIONING

There's plenty of software. None of it is this.

ITSM tools manage internal tickets. Marketplaces list everything for everyone.

We're the IT-specialized, verified, external procurement network in between.

ITSM • SERVICENOW, MANAGEENGINE

Great at internal tickets & assets. Not built to source, compare and negotiate with external vendors.

MARKETPLACES • INDIAMART, GEM

Broad and generic. No IT-specific verification, no structured comparison, no negotiation record.

INFRAVENDRA

IT-specialized + B2B + verified vendors + structured RFQ + on-record negotiation + vendor-led network. The combination is the position.

— BUSINESS MODEL

Subscriptions now. A network to monetize later.

Two-sided SaaS today — free to start on both sides, paid for depth. Transaction and ecosystem revenue come once liquidity is real; they're never the only engine.

— GO-TO-MARKET

Land vendors. Let them bring the buyers.

Supply first, because vendors bring their own demand. Three phases, each feeding the next.

● PHASE 1

Vendor acquisition

Free onboarding for IT resellers, system integrators, OEM partners, distributors, cybersecurity & cloud partners, AMC providers.

Free vendor onboarding

Verified profiles

● PHASE 2

Vendor-led buyer acquisition

Give vendors tools & incentives to invite their existing customers.

5 customers

3 mo Pro

10 customers

6 mo Pro

25 customers

12 mo Pro

Recurring referral commissions later, where commercially appropriate.

● PHASE 3

Buyer expansion

Once RFQs flow, sell directly to procurement, IT, and finance teams.

SMEs

Mid-market

Multi-location

Why supply-first works here: a two-sided marketplace usually stalls on cold-start demand. Ours doesn't — every vendor we onboard arrives holding a book of buyers.

— TARGET MARKET

Start in India. SMEs and mid-market first.

Companies big enough to buy IT continuously, small enough to lack a heavyweight procurement suite — and multi-location businesses that feel the pain most.

SECTORS WE'LL START WITH

Manufacturing

Healthcare

Education

BPO / KPO

Construction

Logistics

Retail

Professional services

Real estate

Technology

SMEs

Buy IT often, no procurement software, rely on 1–2 vendors.

Mid-market

Real volume, real approvals, no system of record.

Multi-location

Distributed buying that's impossible to coordinate over email.

TAM / SAM / SOM

We're not putting an invented number on this slide. A credible sizing needs sourced current data on India's IT spend and reseller base — which we'll build with the round, not fabricate for it.

TAM [sourced — to validate]

SAM [India IT • SME + mid-market]

SOM • 24 mo [bottom-up from vendors × RFQs]

Any figures we add later will be clearly sourced or labelled illustrative.

— THE DEMO • ONE MEMORABLE EXAMPLE

50 laptops in Bangalore. Days → minutes.

A 250-person company needs 50 laptops plus networking gear. Same requirement, two worlds.

TODAY • 2-5 DAYS

Email → vendor calls → Excel → quote PDFs → manual comparison → phone negotiation → approval.

2-5 days

and no record of whether you got the best deal

vs

WITH INFRAVENDRA • ~30 MINUTES

Requirement → RFQ → verified vendors → structured quotes → comparison → negotiation → decision → PO.

~30 min

with savings and audit trail captured automatically

Illustrative target scenario – not a measured result. Real cycle times will be validated with design partners.

MVP

- › Mobile apps
- › Procurement automation

— THE B2B IT PROCUREMENT NETWORK

IT procurement shouldn't live across 20 emails, 5 spreadsheets and 3 WhatsApp groups.

One requirement

One RFQ

Verified vendors

Smarter negotiation

Better decisions

Trusted Vendors. Smarter Procurement.

The B2B IT Procurement Network · India-first

[Founder Name] · [Company Name] · [email] | Let's build the network. → next slide: one-page summary

InfraVendra, on a single page.

PROBLEM

B2B IT procurement is fragmented across email, Excel and WhatsApp — slow quotes, unverifiable vendors, incomparable formats, off-record negotiation, no performance data.

SOLUTION

One workspace: structured requirement → RFQ → verified matched vendors → normalized quotes → on-record negotiation → award → PO → performance.

DIFFERENTIATION

IT-specialized + verified vendor intelligence + an evidence-based Reliability Score that can't be bought + structured negotiation record — not ITSM, not a generic marketplace.

BUSINESS MODEL

Two-sided SaaS (buyer ₹2,999–₹20,000+/mo, vendor ₹1,999–₹4,999+/mo), free entry both sides. Later: transaction fees, verification, API & OEM ecosystem — never the sole engine.

GO-TO-MARKET

Supply-first: onboard vendors free → vendors invite their existing customers (incentivized) → direct buyer expansion once RFQs flow.

NETWORK EFFECT

More vendors → coverage → buyers → RFQs → vendors. Vendors are the distribution channel, so demand isn't cold-started and CAC stays low.

LONG-TERM VISION

The operating network for B2B IT procurement: Requirement → Vendor discovery → RFQ → Quote → Negotiation → Purchase → Delivery → Warranty → Renewal — with matching, price and negotiation intelligence layered on top.

Pre-launch. No traction, customers, revenue, partnerships, certifications or market statistics are claimed. Placeholders ([Company Name], [Founder Name], pricing, TAM) to be validated. Working product name: “InfraVendra.”
